# COMP 4601A
# Fall 2022 - Lab #10

---

## Objectives

Rather than make you implement a recommender system attack detector, I'd like to use lab #10 as an opportunity to collect some more detailed feedback on the course. For this lab, write a thought-out review of the course and submit a PDF (no demo is necessary). **Partners should submit separate reviews for this lab.**

Some questions to consider:
1. What did you like/dislike about the general course design?
2. Would you have liked more lecture content? Less lecture content?
3. Would you have liked more/less supplementary content?
4. What topics did you feel needed more coverage?
5. Were there any topics that you feel could have been skipped, condensed, or combined?
6. Is there anything you wish we would have covered or talked about more?
7. Any other points worth mentioning or suggestions for the course?

I hope you all learned something (ideally, many things) that will continue to be useful as you go forward in your careers. Enjoy the break for those that are coming back and congratulations to those that are graduating!
